

Jack Davison Powell

Atlanta, GA | jackdavisonpowell@gmail.com | github.com/jackdavisonpowell-eng | autogod.org

Self-taught builder of local AI infrastructure: two servers, three data-center GPUs, self-hosted language models, and an autonomous agent that builds software on them overnight. I specified, built and administer all of it. Looking for work where the machine is the product.

PROJECTS

AUTOGOD — autonomous agent system. Designed and run an agent that takes a goal, plans, builds on my own GPUs (2× Tesla P100, Qwen3.8-27B), scores the result and ships what survives. Twelve public projects on autogod.org; three of the four featured came out of this loop.

FRIDAY — local voice assistant. Wake word, whisper.cpp speech recognition, a 27B model and synthesised voice, all on one Tesla V100 32GB. No cloud API. Diagnosed a latency problem to prefill rather than generation by measurement.

Fleet console — control plane. One-page wall showing every agent, GPU and model, with GPU-to-brain layout swaps from the page. Behind Cloudflare Access at fleet.autogod.org.

CLI tools — public repos. loose-ends (shared to-do list agents write to, 559 lines, zero dependencies), scribe (live lecture transcription into Obsidian), embedd (llama.cpp embeddings without a vector DB), ssh-mesh (idempotent key distribution that never copies a private key).

INFRASTRUCTURE I RUN

- thebeast: X99 / i7-5820K, Tesla V100 32GB + 2× Tesla P100 16GB, Debian, llama.cpp; 64 GB VRAM on one board
- Pantheon: Dell R210, Proxmox; game servers and media stack in containers
- Network: VLAN segmentation, Pi-hole DNS, Cloudflare tunnels with TLS and gated auth, Tailscale mesh across sites
- Modified and flashed a 2014 board's BIOS to fix Above-4G decoding so a third GPU would post; budgeted 28 PCIe lanes across three cards

SKILLS

Languages: Python, JavaScript, HTML, CSS

Systems: Linux server administration (Debian, systemd units and timers), Proxmox, Windows 11 power user

AI infrastructure: Self-hosted inference with llama.cpp and whisper.cpp, quantised 27B and 35B models, multi-GPU placement, agent orchestration; AI-assisted development with Claude Code, daily for over a year

Hardware: Full-system PC building since age 11, multi-GPU builds on repurposed data-center cards, overclocking and thermal tuning, BIOS modification

EDUCATION

Georgia Southern University — Statesboro, GA. B.S. Computer Engineering (intended). Enrolled Fall 2026, expected 2030.

Georgia State University — Atlanta, GA. Dual-enrollment computer science coursework completed during high school.

Midtown High School — Atlanta, GA. Graduated 2026. Four consecutive years of computer science, including AP Computer Science.

EXPERIENCE

Food Runner / Server, Druid Hills Golf Club, Atlanta, GA — Summer 2026

- Food running, table service and busing at a private club with a high-profile membership
- Consistent, polished service under pressure

Construction Laborer, Gale Builders, Atlanta, GA — Summer 2024

- Ground-up residential construction: framing, wall construction, roofing installation
- Full eight-hour shifts on physically demanding sites with a small crew, on schedule

Food Service Associate, Clarksville Lanes, Atlanta, GA — Summer 2024

- Prepared and served food and drink in a high-volume venue at peak hours
- Ran orders across a large floor, coordinating with kitchen staff; pressure washing and facility cleaning

Teacher / Counselor, Horizons Kids, Atlanta, GA — Summer 2023

- Supervised and led daily activities for a class of children
- Planned and delivered lessons and games with fellow counselors; adapted to individual needs

Leadership Trainee, YMCA Camp High Harbor — 2022 – 2023

- Five weeks of sleep-away leadership training: Advanced Leadership Camp and Leader-in-Training

ACTIVITIES

Tennis, eight years, two competitive. Sews his own clothing, including custom jeans. Built his own sim-racing rig.
